

Developer API

Robust with inherent adaptability and reliability

The very nature of SMS and indeed the FASTSMS system is that it loves to be developed and integrated. A wide range of software and applications can benefit from the addition of SMS functionality and it's a great way to get ahead of the competition.

With access to our well documented and supported API (Application Programming Interface) you will be able to connect directly to the FASTSMS Message Platform via a number of protocols.

Sending via the API from within your application can be as simple as generating a HTTP request that contains the relevant variables and sending them to the FASTSMS gateway; this can be in the form of a HTTP POST or GET via your desired programming language.

The protocols that are supported by our API consist of;

- HTTP
- FTP/SCP
- SMTP
- XML

The FASTSMS API gateway has been implemented into many different business solutions including server monitoring & alert systems, contact management databases and many other advanced applications.

If your application already supports email you can integrate SMS without the need for the API – using our Email to SMS service you can effortlessly add SMS functionality into any software that already supports SMTP.

Want to know more...

Add another level to your systems: When you integrate SMS into your programming environment you will dramatically increase communication functionality, gaining a much needed lead on competitive systems.

Versatile by nature: The variety of protocols available to you means that SMS can work within most technologies. This coupled with our own robust technology on a Tier 1 network infrastructure ensures the highest availability and performance.

Support from us at every step: Manage your FASTSMS account through your own application to minimize administration workload. Our own development team will always be on hand to discuss all technical and practical issues. We are always happy to discuss your requirements and provide free documentation on our API's.

We're always there for you: You will have immediate access to the full range of online help documentation, built up over years of working closely with users; this means you will never be lost or dependent on someone else's help - but if what you need isn't there, we're only on the other end of a phone.

Become a Reseller...

You can also become a FASTSMS reseller – all our SMS products are available rebadged in your own branding with no mention of our involvement. Benefit from a business in a box with the highest level of support from SMS experts. Find out more about this by browsing our site or giving us a call.

Become an Affiliate...

We now offer our users the opportunity to become an affiliate; this means you gain commission in the form of cash for any referrals as well as any future purchases they then make. For more information visit our affiliate page.

What to do next...

Getting started is quick and easy, you can get yourself a free account online or give us a call on 0800 954 5305 and we'll set you up with a free demo within minutes. Alternatively for more information email helpdesk@fastsms.co.uk and we'll advise you on the best solutions for you.
