Virtual Mobile Numbers

Open the door to two way SMS text messaging

Imagine receiving an email you couldn't reply to, or only being able to listen in a phone call, not respond – now apply that same logic to a text message...

Two-way functionality has become an absolute necessity for online SMS which is why we make it so readily available to our users.

Adding a Virtual Mobile Number (VMN) to your account opens up a great many features, allowing you to...

- **Receive unlimited amounts of SMS messages**
- **Messages stored in an online Inbox**
- **Familiar message folder and rules, making it easy to manage**
- **Forward inbound messages to email addresses as well as mobile phones**
- **Forward messages to a URL using our HTTP API**
- **Set up an auto-response to particular inbound messages**
- **Trigger a distribution list broadcast remotely by texting your account**
- **Set up unlimited keywords with auto-responses and actions**

There are very few instances where we would honestly say that you don't need or couldn't benefit from a VMN.

Virtual Mobile Numbers are compatible with all FASTSMS solutions including NetMessenger, SMSLook, and Email to SMS; they can even be used by developers to enhance their own applications and software.

You can even have more than one VMN attached to any one account, having messages forwarded accordingly.

Want to know more...

It's your number nobody else's: You will enjoy all the benefits that come with being the sole user of a dedicated inbound Virtual Mobile Number (VMN) - meaning you don't share with anyone else, it's yours!

Publish with your other details: Any responses to your sent SMS messages will come straight back to you, so you receive them as quickly as you would do as if to a phone. Advertise your number as a contact option for both clients and colleagues - adding another level to your communication, helping you keep in touch.

Perfect for your mobile marketing: Receive responses to your mobile marketing campaigns and use the array of tools available to you through NetMessenger to more easily manage your campaign, saving you time and yielding better results.

We're always there for you: You will have immediate access to the full range of online help documentation, built up over years of working closely with users; this means you will never be lost or dependent on someone else's help - but if what you need isn't there, we're only on the other end of a phone.

Use with NetMessenger...

You can use your Virtual Mobile Number with our browser based software, NetMessenger. This connects you directly to the FASTSMS system, so you have the same level of reliability as any of our other SMS tools.

NetMessenger has the advantage that it is completely mobile, just like you – all you need is your login details and any PC can then be used to access your account.

NetMessenger also offers a multi-user level where you can manage your own sub-accounts as a master administrator, ideal if you have several people using your account and you want to keep an eye on credit use. You can even generate reports on individual or overall usage.

NetMessenger is becoming more feature rich all the time, with our developers constantly working from our user feedback making it all it can be.

With no software to download or maintain, NetMessenger is the ideal method of SMS communication if you want to use it on the move.

Consider Outlook Mobile Service (OMS)...

If you use Microsoft Office Outlook 2007 you may find you could greatly benefit from using OMS. Outlook Mobile Service is the new feature in Outlook that allows you to create and send text messages to a mobile device from within Outlook in the same way you would email messages. Your messages are still sent through FASTSMS routes, assuring you of the highest delivery rates available. With the addition of a Virtual Mobile Number you can manage all your SMS communications within Microsoft Outlook alongside your email, seamlessly.

Try SMSLook instead...

If you don't think the browser-based message platform, NetMessenger is for you we also provide our users with free desktop software – SMSLook. Available as a standalone application on your PC, SMSLook communicates with the NetMessenger platform giving you the same great features as the browser-based platform as well as a few only available with SMSLook.

SMSLook is also neatly integrated with MS Outlook, allowing you to open your SMS software from where you manage your emails – you can even share contact information between the two. SMSLook is also being constantly developed to add in more messaging features and make it better for you.

If you think this desktop software would be a better solution to your needs take a look at our SMSLook pages or give us a call.

Become an Affiliate...

If you have access to people who would potentially be interested in FASTSMS services then you could find our Affiliate Programme very rewarding. For example you could have regular contact with SME's, Educational Institutions, Marketing Agencies or many others in your own business. By recommending FASTSMS as your preferred supplier of Business SMS Services you would then receive cash rewards for any and all purchases made by those referred.

Become a Reseller...

You can also become a FASTSMS reseller – all our SMS products are available rebadged in your own branding with no mention of our involvement. Benefit from a business in a box with the highest level of support from SMS experts. Find out more about this by browsing our site or giving us a call.

What to do next...

Getting started is quick and easy, you can get yourself a free account online or give us a call on 0800 954 5305 and we'll set you up with a free demo within minutes. Alternatively for more information email helpdesk@fastsms.co.uk and we'll advise you on the best solutions for you.
